

IR Room Remote

IR1-5C

Nobody wants a home automation system that can only be controlled at certain pre-defined access points. Which is why our credit-card sized remote can send control signals to any keypad or touchpad* for broadcast to any module, anywhere in the house.

That means that as long as you have the living-room remote, you can close the living-room windows, drop the drapes, and change living-room lighting scenes from anywhere in the house.

*Touchpads require optional 3rd party IR receiver to be installed to transmit IR commands.

Primary Features

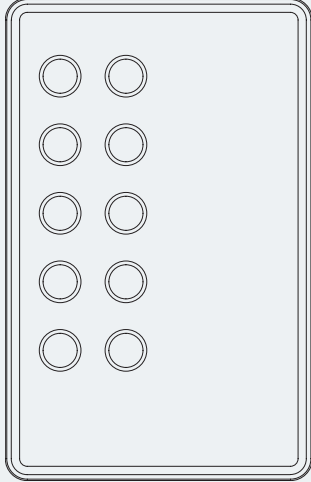

- Credit-card sized remote control conveniently fits in the palm of your hand or shirt pocket
- 10 buttons, arranged in 2 banks of 5, may duplicate scenes on keypads or touchpads, or be assigned unique scenes as desired
- An easily customized label legend is simple and quick to configure
- Remote control signals can be received and transmitted by any keypad or touchpad* within its range
